Considering redoing presentation using current draft as a guide. That may help redo some formatting and such whilst being quicker than a full restart.

First taking a sec to make sure my plotted figs are in their final form. Have tried Francesco's suggestion for the dynamic map vs simulation plot clarity issue, it helps a lot:

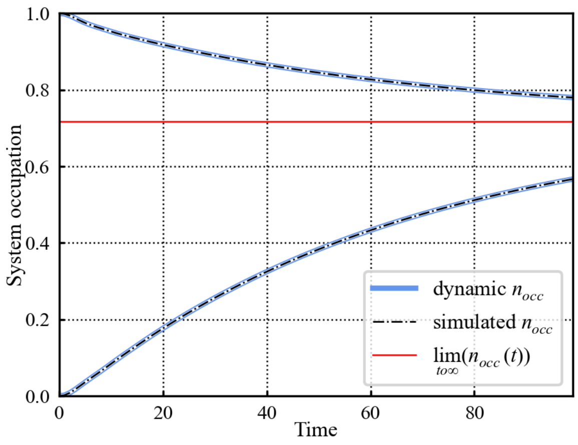

Figure 1: Reworked overlapping plot

Am currently trying to get an animated system occupation over parameter variation animation working; if i can show a parameter variation (I.E coupling strength) which produces memory effects; that'd be cool for presentation reasons.

Coding sidenote - currently the plotting code is a mess of using the standard params dict and args; i've implemented a quick "copyDict" function which can quickly copy and edit dictionaries in 1 line. I should asp refactor some of the code so that plotting always uses the figparams for everything; and i simply quickly edit the figparams dict using this copyDict function.

May need to think about this further; i could restructure that standardFigParams dict a bit (I.E include list of standard colors, list of labels... then i can do all my plotting through one dictionary instead of arbitrary parameters), however not a now problem; presentation comes first.

Coding sidenote - currently have the main simulation utility and a simulation queue. However the simulation queue also has assorted utilities for the purposes of running/saving simulation runs. This may be worth splitting off into it's own little utility as well; so the structure goes "main simulation classes" <-> "simulation handling utilities" <-> "top level simulation queue".

Noted [illegible] in the presentation [illegible] for [illegible] suspect that it MIGHT help [illegible] mp4 [illegible] to [illegible] (which has mp4 files displayed); thats the only difference i can see assuming there's not some metadata difference internal to mp4s)

A good analogy [illegible] docking [illegible] have a single connect [illegible] open something familiar [illegible] makes [illegible] Again not a now thing, but to be considered
